

# ECON 101

## TA Worksheet, Module 12 (Market Structure)

Name: \_\_\_\_\_

TA: \_\_\_\_\_

1. Draw a perfectly competitive firm (demand and cost curves). Show the profit maximizing quantity.
2. Draw a picture of a firm with market power. Show the profit maximizing price and quantity.
3. Give an example of an oligopolistic industry. How do you think firms compete in that industry? (just price? Quality? Product differentiation?) Do you think they collude at all?

4. Explain why Marginal Revenue equals price for a firm in perfect competition but  $MR < P$  for a firm with market power.

5. Consider this firm's demand schedule. What is the marginal revenue for  $Q=4$ ?

Price	Quantity
12	2
10	3
8	4
6	5

6. Explain how market power is related to the slope of the demand curve.

7. Suppose:  $MC=2Q$   
Demand:  $P=120-Q/2$  (so  $MR=120-Q$ )  
What is the profit maximizing  $P$  and  $Q$  for the firm?
